# FINAL E-R DIAGRAM DOCUMENT

We made the following changes from our initial E-R Diagram Document: -

- In our Initial ER Diagram, there were attributes in appointment entity which were repeating so we removed repeating and unnecessary attributes in the APPOINTMENT entity as it will create data redundancy.
- there were large number of many to many relationships like Department-Doctors, Admin-Hospital Contact, Prescribed Med – Medicine which was making the diagram complex. So, we converted these relationships to one to many or created associative entities to relate them efficiently.
- We also removed unnecessary entities like HOSPITAL and HOSPITAL CONTACT which we considered out of scope for this project. Also, we rectified primary keys and foreign keys in the diagram.
